*This manual supersedes TM 11-5820-358-35P, 20 March 1962, including all changes.

SECTION I

INTRODUCTION

1. Scope

This manual lists repair parts required for the performance of direct support, general support, and depot maintenance of the Radio Receiver R-390A/URR.

2. General

The Repair Parts and Special Tools List is divided into the following sections:

a. *Repair Parts—Section II.* A list of repair parts authorized for the performance of maintenance at the direct support, general support, and depot level.

b. *Special tools, Test and Support Equipment—Section III.* (Not Applicable).

c. *Federal Stock Number and Reference Number—Section IV.* A list of Federal stock numbers in ascending numerical sequence, followed by a list of reference numbers appearing in all listings, in ascending alpha-numeric sequence, cross-referenced to the illustration figure number and item number.

d. *Reference Designation Cross-Reference to Page Number Index—Section V.* A list of reference designations used in ascending alpha-numerical sequence, cross-referenced to the page number of the Repair Parts List.

3. Explanation of Columns

The following provides an explanation of columns in the tabular lists, section II.

a. *Source, Maintenance, and Recoverability Codes (SMR)—Column 1.*

(1) Source code indicates the selection status and source for the listed item. Source codes are—

Code	Explanation
P	Repair parts which are stocked in or supplied from the GSA/DSA, or Army supply system, and authorized for use at indicated maintenance categories.
P2	Repair parts which are procured and stocked for insurance purposes because

Code

Explanation

the combat or military essentiality of the end item dictates that a minimum quantity be available in the supply system.

P9—Assigned to items which are NSA design controlled: unique repair parts, special tools, test, measuring and diagnostic equipment, which are stocked and supplied by the Army COMSEC logistic system, and which are not subject to the provisions of AR 380-41.

P10—Assigned to items which are NSA design controlled: special tools, test, measuring and diagnostic equipment for COMSEC support, which are accountable under the provisions of AR 380-41, and which are stocked and supplied by the Army COMSEC logistic system.

M—Repair parts which are not procured or stocked, but are to be manufactured in indicated maintenance levels.

A—Assemblies which are not procured or stocked as such, but are made up of two or more units. Such component units carry individual stock numbers and descriptions, are procured and stocked separately, and can be assembled to form the required assembly at indicated maintenance categories.

X—Parts and assemblies which are not procured or stocked and the mortality of which normally is below that of the applicable end item or component. The failure of such part or assembly should result in retirement of the end item from the supply system.

X1—Repair parts which are not procured or stocked. The requirement for such items will be filled by use of the next higher assembly or component.

X2—Repair parts which are not stocked. The indicated maintenance category requiring such repair parts will attempt to obtain same through cannibalization.

Where such repair parts are not obtainable through cannibalization, requirements will be requisitioned, with accompanying justifications, through normal supply channels.

G—Major assemblies that are procured with PEMA funds for initial issue only as exchange assemblies at DSU and GSU level. These assemblies will not be stocked above direct support and general support level or returned to depot supply level.

(2) Maintenance code indicates the lowest category of maintenance authorized to install the listed item. The maintenance level codes are—

Code	Explanation
O	Organizational maintenance
F	Direct support maintenance
H	General support maintenance
D	Depot maintenance

(3) Recoverability code indicates whether unserviceable items should be returned for recovery or salvage. Items not coded are expendable.

Code	Explanation
R	Repair parts and assemblies which are economically repairable at DSU and GSU activities and are normally furnished by supply on an exchange basis.
S	Repair parts and assemblies which are economically repairable at DSU and GSU activities and which normally are furnished by supply on an exchange basis. When items are determined by a GSU to be uneconomically repairable, they will be evacuated to a depot for evaluation and analysis before final disposition.
T	High dollar value recoverable repair parts which are subject to special handling and are issued on an exchange basis. Such repair parts normally are repaired or overhauled at depot maintenance activities.
U	Repair parts specifically selected for salvage by reclamation units because of precious metal content, critical materials, or high dollar value reusable castings or castings.

b. *Federal Stock Number, Column 2.* This column indicates the Federal stock number assigned to the item and will be used for requisitioning purposes.

c. *Description, Column 3.* This column indi-

cates the Federal item name and any additional description of the item required. A part number or other reference number is followed by the applicable five-digit Federal supply code for manufacturers in parentheses.

d. *Unit of Measure (U/M), Column 4.* A two-character alphabetic abbreviation indicating the amount or quantity of the item upon which the allowances are based (e.g., ft, ea, pr, etc).

e. *Quantity Incorporated in Unit, Column 5.* This column indicates the quantity of the item used in the assembly group. A "V" appearing in this column in lieu of a quantity indicates that a definite quantity cannot be indicated (e.g., shims, spacers, etc.).

f. *30-Day DS/GS Maintenance Allowances, Columns 6 and 7.*

NOTES

Allowances in GS column are for GS maintenance only.

(1) The allowance columns are divided into three subcolumns. Indicated in each subcolumn, opposite the first appearance of each item, is the total quantity of items authorized for the number of equipments supported. Subsequent appearances of the same item will have the letters "REF" in the applicable allowance columns. Items authorized for use as required, but not for initial stockage, are identified with an asterisk in the allowance column.

(2) The quantitative allowances for DS/GS levels of maintenance will represent initial stockage for a 30-day period for the number of equipments supported.

(3) Determination of the total quantity of parts required for maintenance of more than 100 of these equipments can be accomplished by converting the equipment quantity to a decimal factor by placing a decimal point before the next to last digit of the number to indicate hundredths and multiplying the decimal factor by the parts quantity authorized in the 51-100 allowance column. Example, authorized allowance for 51-100 equipments is 40; for 150 equipments multiply 40 by 1.50 or 60 parts required.

g. *1-Year Allowance Per 100 Equipments/Contingency Planning Purposes, Column 8.* This column indicates opposite the first appearance of each item the total quantity required for distribution and contingency planning purposes. The range of items indicates total quantities of all authorized items required to provide for adequate support of 100 equipments for 1 year.

h. *Depot Maintenance Allowance Per 100 Equipments, Column 9.* This column indicates

opposite the first appearance of each item, the total quantity authorized for depot maintenance of 100 equipments. Subsequent appearances of the same item will have the letters "REF" in the allowance column. Items authorized for use as required, but not for initial stockage are identified with an asterisk in the allowance column.

i. Illustrations, Column 10. This column is divided as follows:

(1) *Figure number, Column 10a.* Indicates the figure number of the illustration in which the item is shown.

(2) *Item Number, Column 10b.* Indicates the callout number used to reference the item on the illustration.

4. Special Information

a. Repair parts mortality is computed from failure rates derived from experience factors with the individual parts in a variety of equipments. Variations in the specific application and periods of use of electronic equipment, the fragility of electronic piece parts, plus intangible material and quality factors intrinsic to the manufacture of electronic parts, do not permit mortality to be based on hours of end item use. However, long periods of continuous use under adverse conditions are likely to increase repair parts mortality.

b. Split coding such as AF, MD, PH, etc., found in the source column indicate parts which require manufacture, assembly, or stockage at a category higher than that authorized to install the item. For example, an item coded MD-O denotes the source of the item to be manufactured (M) at the depot level (D) and authorized for installation at the organizational level (O).

c. The following publications pertain to the Radio Receiver R-390A/URR.

TM 11-5820-358-10	Operator's Manual
TM 11-5820-358-20	Organizational Maintenance Manual
TM 11-5820-358-20P	Organizational Maintenance Repair Parts and Special Tools List
TM 11-5820-358-35	Field and Depot Maintenance Manual

5. How to Locate Repair Parts

a. When Federal stock number or reference number is unknown:

(1) *First.* Find the illustration covering the unit to which the repair part belongs.

(2) *Second.* Identify the repair part on the illustration and note the illustration figure and

item number (reference designation) of the repair part.

(3) *Third.* Using the Reference Designation cross-reference to page number (sec. V) find the item number (reference designation) and note the page number listed. Locate the item in the Repair Parts List.

b. When Federal stock number or reference number is known:

(1) *First.* Using the Index of Federal Stock Numbers and Reference Numbers find the pertinent Federal stock number or reference number and note the figure and item number (reference designation). This index is in ascending FSN sequence followed by a list of reference numbers in ascending alpha-numeric sequence, cross-referenced to the illustration figure number and item number (reference designation).

(2) *Second.* Using the Reference Designation cross-reference to page number (sec. V) find the item number (reference designation) and note the page number listed. Locate the item in the Repair Parts List.

6. Federal Supply Codes for Manufacturers

<i>Code</i>	<i>Manufacturer</i>
72962	Elastic Stop Nut Corp. of America 2330 Vauxhall Road, Union, N.J. 07083
72982	Erie Technological Products Inc. 644 W. 12th St., Erie, Pa. 16512
78189	Illinois Tool Works Inc., Shakeproof Division, Elgin, Ill. 60126
79136	Waldes Kohinoor Inc., 47-16 Austol Place, Long Island City, N.Y. 11101
80063	Army Electronics Command Procurement and Production Directorate, Fort Monmouth, N.J. 07703
81349	Military Specifications, Promulgated by Stand- ardization Div., Directorate of Logistic Ser- vices, DSA
94375	Automatic Metal Products Corp. 315-323 Berry St., Brooklyn, N.Y. 11211
96906	Military Standards Promulgated by Standardi- zation Div., Directorate of Logistic Services, DSA

7. Reporting of Equipment Publication Improvements

The reporting of errors, omissions, and recommendations for improving this publication by the individual user is encouraged. Reports should be submitted on DA Form 2028 (Recommended Changes to Publications) and forwarded direct to Commanding General, US Army Electronics Command, ATTN: AMSEL-MA-CR, Fort Monmouth, N.J. 07703.

(Next printed page is 4)
